Professional Profile

"If you need motivation for something to do,
then don't do it"
-Elon Musk

When i started coding i didnt need any motivation to keep me on going, i was working and coding every day and using my skills with satisfaction to create programs. Since I was little i was following the upgrades coming to computers and their compoments. I started coding in 2016 with C++ and stated to do it daily since September 2019. I can finish my tasks myself succesfully, but can also be a team player if i need to.

At the moment I am a student at the Faculty Of Computer Science And Engineering, Skopje.
